

Work Report — Browse Companies

Project: JobHuntly HR Recruitment Platform
Developer: Esther Ingabire

Date: June 02, 2026
Branch: `feature/browse-companies`

SUMMARY

Completed the Browse Companies feature (screen 1.3) by enhancing the existing company module with search, filtering, and pagination. The base `GET /companies` endpoint existed but returned a flat unfiltered list with no pagination. The `POST /companies` endpoint was implemented in the service but had no controller route. Both gaps are now closed. All endpoints were verified end-to-end through the live API with no demo or seed data left in the database.

BRANCH DELIVERED

Branch	Purpose	Status
<code>feature/browse-companies</code>	Screen 1.3 — Browse Companies	Pushed

SCHEMA CHANGES

Model	Field	Type	Reason
Company	<code>industry</code>	String (nullable)	Required to support "Companies by Category" filter on screen 1.3
Company	<code>slug</code>	String (unique, nullable)	Required for clean company profile URLs

API ENDPOINTS

Method	Endpoint	Auth	Description
<code>POST</code>	<code>/api/v1/companies</code>	Bearer Token	Create a new company and link the creator as COMPANY_OWNER
<code>GET</code>	<code>/api/v1/companies</code>	Public	Browse companies with search, filters and pagination
<code>GET</code>	<code>/api/v1/companies/:id</code>	Public	Get a single company profile (existing)
<code>PATCH</code>	<code>/api/v1/companies/:id</code>	Bearer Token	Update company settings (existing)

GET /COMPANIES — QUERY PARAMETERS

Parameter	Type	Default	Description
<code>search</code>	string	—	Case-insensitive match on company name and description
<code>location</code>	string	—	Partial case-insensitive match on location
<code>industry</code>	string	—	Partial case-insensitive match on industry/category
<code>companySize</code>	string	—	Exact match on company size
<code>page</code>	number	1	Page number
<code>limit</code>	number	12	Items per page

RESPONSE SHAPE

Field	Description
<code>data[]</code>	Array of companies for the current page
<code>meta.totalItems</code>	Total companies matching the filters
<code>meta.totalPages</code>	Total number of pages
<code>meta.currentPage</code>	Current page number
<code>meta.hasNextPage</code>	Whether a next page exists
<code>meta.hasPreviousPage</code>	Whether a previous page exists

FILES CHANGED

File	Change
<code>prisma/schema.prisma</code>	Add industry and slug to Company model
<code>dto/query-company.dto.ts</code>	New — query param validation DTO
<code>dto/create-company.dto.ts</code>	Add industry field
<code>companies.service.ts</code>	Refactor findAll() with dynamic filters and pagination
<code>companies.controller.ts</code>	Add POST endpoint, wire @Query() on GET
<code>companies.service.spec.ts</code>	Replace placeholder with 7 tests
<code>companies.controller.spec.ts</code>	Replace placeholder with 5 tests

TEST COVERAGE

File	Tests	Result
<code>companies.service.spec.ts</code>	7	PASS
<code>companies.controller.spec.ts</code>	5	PASS
Full Suite (10 suites)	51	PASS

API VERIFICATION

All scenarios tested end-to-end through the live API. No seed or demo data used — companies were created via `POST /companies` using a real JWT token, then queried and deleted after verification.

Scenario	Request	Result
No filters	<code>GET /companies</code>	PASS
Search by name	<code>GET /companies?search=maze</code>	PASS
Filter by industry	<code>GET /companies?industry=Design</code>	PASS
Filter by location	<code>GET /companies?location=San+Francisco</code>	PASS
Filter by company size	<code>GET /companies?companySize=startup</code>	PASS
Pagination page 1	<code>GET /companies?page=1&limit=2</code>	PASS
Pagination page 2	<code>GET /companies?page=2&limit=2</code>	PASS
Combined filters	<code>GET /companies?industry=Design&location=San+Francisco</code>	PASS
No match	<code>GET /companies?search=nonexistent</code>	PASS
